

INSTALLATION GUIDE: CERAMIC KNOBS

Ceramic knobs are a great way to add style and personality to your furniture. This guide will walk you through the steps to ensure they are installed properly and look fantastic.

1. Opening the Package

Begin by carefully opening the box containing the set of knobs. Each set includes several units, carefully protected with packaging materials to prevent damage during shipping.

- **Tip:** Use scissors or a box cutter to open the package, but handle it carefully to avoid scratching or breaking the knobs.

2. Unpacking the Knobs

Gently remove each knob from the packaging. Ensure that all necessary components, such as nuts and screws, are included.

- **Important:** Handle the knobs with care to prevent chipping or damage to the ceramic surface.

3. Preparing the Installation Area

Before starting, identify the drawers, doors, or cabinets where you want to install the knobs. Clean the surfaces thoroughly to remove dust or debris that could interfere with the installation.

- Check if the existing holes are compatible with the size of the knobs. If not, adjust or drill new holes as needed.

4. Installing the Knob

Take the knob and insert it into the designated hole. Ensure it is centered and properly aligned.
