Declaration of Conformity

House Nordic ApS confirms that all packaging and packaging components are designed and manufactured in full accordance with the material-specific requirements outlined herein. Furthermore, all packaging is constructed to allow easy separation into mono-materials, thereby supporting recyclability. Threshold values specified in Article 5 (PPWR) for substances of concern are met, and no substances are intentionally added that negatively affect recyclability or circularity. All packaging is free from substances of very high concern (SVHC) and intentionally added PFAS substances and all printing inks used comply with EuPIA guidelines.

In addition, the packaging is optimized for volume efficiency and does not exceed 50% empty space unless justified.
