

Dear customer,

We are pleased that you have chosen a product made of solid mango wood. The wood is processed by hand, stained in a natural color and varnished, creating unique pieces. The feet are made of black lacquered metal with vintage style.

Different types of wood with different colors and structures can be used in a piece of furniture. Therefore, color differences and deviating structures cannot be avoided and Color shades and signs of use can always be different! Rejected corners and edges are intentional and part of the character of the series - these do not justify a complaint! If iron parts are worked into your product, "rust film" is intentional and gives the product an even stronger antique look. During processing, it was deliberately avoided serrations, knotholes, irregularities, notches, furrows, holes, cracks, uneven corners and edges, color deviations, nails and screws where necessary, as well as to eliminate **signs of wear and tear**.

All these properties give each product a unique character and a touch of exclusivity.

Each product is therefore unique!

How to properly clean and care for your furniture:

Never use harsh household cleaners, scouring agents or a damp cloth.

In the case of light soiling, please observe the following cleaning tips:

It is best to put furniture polish on the duster and not directly on the wood. The polish removes slight gray haze, revitalizes the surface structure or grain and forms a protective film against finger marks or fingerprints. Small amounts of polish prevent patchy shine.

Think of a suitable protection (felt gliders) for your floors (parquet floor)!!!! Obtain screws/dowels - for wall mounting - depending on the surface from specialist shops!!

Wood is a natural product - it lives and works!

It reacts to fluctuating room temperatures and inappropriate humidity. The drying cracks, stiff doors or drawers that may occur over time are unavoidable with this solid wood furniture. Stiftung Warentest, medicine and science recommend an average room humidity of 45 - 55%. Especially in the winter months, the humidity can drop significantly due to the use of your heating. Therefore, always try to keep the humidity constant, e.g. by using water reservoirs on your radiators. It is best not to place the furniture directly next to a heat source or in direct sunlight.

General important information:

The dimensions of furniture from industrial series production are basically approximate dimensions. This furniture is made exclusively for general living needs and is not suitable for the object sector, public facilities, hotels, etc.

No liability can be accepted for damage caused by non-observance of the product information.

The Gutmann-Factory team hopes you enjoy your new quality furniture.
