It is used in making a fantastic material, moisture (shrinkage according to quality mark RAL). As this process depends on the local moisture content, wooden furniture is best not exposed to extremely high or low humidity and fluctuations in humidity should be avoided. Da dieser Prozess vom Feuchtigkeitsgehalt der lokalen Luft abhängt, ist es wichtig, dass die Luftfeuchtigkeit im Raum nicht zu hoch oder zu niedrig ist, sondern im Bereich von 45 bis 55 Prozent liegt. Andernfalls kann es passieren, dass sich das Holz verzieht und Risse bekommt.
