

MAXI-COSI See Baby Monitor Pro

Cry Detection & Cry Translation

Notify parents only when matters. Unlike sound detection, your baby monitor will alert you once a cry is detected and filter from other sounds like street or pet noises.

Coupled with unique AI cry analysis technology, it gives you real-time translation of what your baby's cries might mean. 6-month free Baby Cry Analysis service is included.

4K resolution with night vision

The best image resolution with this new module on the app. Even in the dark, you can see your baby clearly while sleeping.

5-inch parenting unit

Include a 5" parenting unit 720p for more streaming options.

Everyday ease

Still works with the Maxi-Cosi Connected Home app to allow you to set up advanced & personalized routines and access extra functionalities such as the remote Pan Tilt Zoom, soothing sounds or the temperature & humidity levels, all within the unique Maxi-Cosi ecosystem.
